

NCR Aloha Kitchen v18.1

Release Content Profile

Last Updated: July 07, 2020

Introducing “Long Ticket Time” Alerts

You can use an interactive alert called “long ticket time” that targets items that do not get bumped before the time the item is due. When the time lapses, a screen immediately appears to allow you to move the item to the front of any queue in which the item appears or ignore the alert and take no action.

Configuring the Background Color of a Kitchen Screen

You can change the background color of a kitchen screen to apply your restaurant branding to your screens.

Supporting SMS Text Paging with LRS

We now support SMS text paging with Long Range Systems (LRS) in the same manner as HME/JTech, to better support International phone numbers.

Suppressing Quantity from Modifiers on Video Cell

You can suppress the modifier quantity on the video cell when you order multiples of the parent item.
